

Max Q

KERBWAY INLET CAPTURE PROGRAM

This program is written for Microsoft Excel.

On boot up, use the zoom buttons to centre the working area of each of the sheets in your screen.

When satisfied with the look save the program for future use.

To place a shortcut on your desktop go to the saved file then: *Right click – Send to – Desktop*.

Before use browse quickly through the help files to become familiar with the program's capabilities.

Use

The program faithfully replicates model test inlet captures recorded at Urban Water Resources Centre of University of South Australia. In kerb mode it allows the user to assess inlet captures for the various combinations of grate/cover, lintel length, pavement crossfall, kerb type and road grade including sags catered for by the Kerbway system. In Centre or Field modes it allows capture for those configurations to be assessed.
